

Environmental data specialists

Last Updated lundi, 15 février 2010

Dipole Consulting SPRL offers consulting, technical support, training and software development services in the environmental data management software field, and more specifically transmission, storage and reporting technologies.

Environmental datasets : All our activities are exclusively focused on agronomic or environmental concerns. We are specialist of data transmission, storage and reporting. Environmental data sets have specific features :- they can be very large.- they are often spatially distributed and/or time dependant.- they need to be pre-processed or modelled before analysis.

We have developped advanced skills in developping applications managing that type of datasets. Philosophy - "Sustainable software for a sustainable future"

Environmental applications are often critical. Dipole Consulting tries to find the best balance between the requirements of our clients and a cost effective solution. That is why Dipole Consulting relies only on Free and Open Source Softwares (FOSS).

For more information, check the list of our services and products, some of our references or contact us by e-mail : info@dipole-consulting.com We are actively looking for collaborators. If interested, check the list of positions and training on our Job's page Since January 2008, ITAE activities have been incorporated into Dipole Consulting SPRL !
