

## JWaveLib - API

Last Updated lundi, 15 février 2010

The JWaveLib API version targets users that does not need access to the library source code and simply want to connect and use Coronis sensors into their Java application.

The JwaveLib API products contains :

- a JAR library with all the classes needed to connect a Waveport and communicate with Wavetalk, Wavetherm, WaveFlow, Wavesense and Wavetank sensors.

- a complete javadoc of the API

If your are interested in our JWaveLib API product, contact us by e-mail or phone (+32 475 665 668)
